

Clinical Case Report: Type 2 Diabetes Mellitus Management

Patient Overview

Patient John Carter, a 54-year-old male, was admitted to Riverside General Hospital in March 2026. He was diagnosed with Type 2 Diabetes Mellitus by Dr. Sarah Williams, an endocrinologist specializing in Endocrinology at Riverside General Hospital.

Symptoms and Diagnosis

Type 2 Diabetes Mellitus commonly presents with Polyuria, Fatigue, and Blurred Vision. The disease primarily affects the Pancreas and is closely linked to Obesity, which is considered a major risk factor for the condition. Type 2 Diabetes Mellitus is a subtype of Endocrine Disease.

Risk Factors

Obesity significantly increases the likelihood of developing Type 2 Diabetes Mellitus. Sedentary Lifestyle is also recognized as a risk factor contributing to the onset of Type 2 Diabetes Mellitus, particularly in patients over the age of 45.

Treatment

Dr. Sarah Williams prescribed Metformin to treat Type 2 Diabetes Mellitus. Metformin is the first-line drug therapy for this condition. In cases of poor glycemic control, Insulin Therapy may also treat Type 2 Diabetes Mellitus. Metformin is contraindicated for patients with Chronic Kidney Disease due to the risk of lactic acidosis.

Procedure

John Carter underwent a Glucose Tolerance Test, a diagnostic procedure performed by Dr. Sarah Williams at Riverside General Hospital to confirm impaired glucose metabolism. The Glucose Tolerance Test is also used to treat ambiguity in borderline Type 2 Diabetes Mellitus diagnoses.

Specialty Management

Type 2 Diabetes Mellitus is managed by the Endocrinology specialty. Dr. Sarah Williams specializes in Endocrinology and is affiliated with Riverside General Hospital, where she treats patients with chronic metabolic conditions.

Related Infectious Disease Note

Separately, the hospital also reported a case of Pneumonia in an unrelated patient. Pneumonia is caused by *Streptococcus Pneumoniae*, a bacterial Pathogen, and presents with Fever and Cough. Pneumonia was treated by the Antibiotic Therapy procedure, performed under the Pulmonology specialty.
